After Scotch on the Rocks in London I was struck with how many developers are also gamers. It seems there are a lot of us who build applications for people, then go home and relax in front of an Xbox 360 Console.

With that in mind I thought I would wrap up a service I have used in the past. A site, <http://www.mygamercard.net/> provides a service where you can generate a graphic of your Xbox 360 account. They call this a Gamer Card, and it is available in a few different formats.

There is an example [here](#)

You can download the project here: <http://gamercard.riaforge.org/>

To add this to your site simply download the CFC from [www.riaforge.org](http://www.riaforge.org) ( <http://gamercard.riaforge.org/> ), and place it in a directory on your site. Here is a breakdown of the arguments it takes:

### Calling the CFC

#### 1. accountName (String)

This is the Xbox 360 account name to use when generating the displayed card.

#### 2. Country (String)

If you want to generate the card in a language other than English you can send in a country here. A full country list is below.

#### 3. Format (String)

There are three different format that the card can be generated in:

1. flash
2. image
3. silverlight

### Example:

```
<cfset request.gamerCard = createObject('component', 'gamerCard')>

    <cfset args['accountName'] = 'Ect0z'>
    <cfset args['country'] = ''>
    <cfset args['format'] = 'flash'>

<cfoutput>#request.gamerCard.getTag(argumentCollection=args)#</cfoutput>
```

The example here shows the multi format returns [Example](#)

### Country codes

Send in the full country name, and the service inserts the short code.  
Leave it blank to default to english.

" " - English  
CA - Catalan  
ZH - Chinese  
CS - Czech  
DA - Danish  
NL - Dutch  
FI - Finnish  
FR - French  
DE - German

EL-Greek  
HI-Hindi  
HU-Hungarian  
GA-Irish Gaelic  
IT-Italian  
JA-Japanese  
KO-Korean  
MS-Malay  
NB-Norwegian  
PL-Polish  
PT-Portuguese  
RU-Russian  
SK-Slovak  
ES-Spanish  
SV-Swedish  
CY-Welsh
